

Response to reviewers

Reviewer 1	Reply
1. Remove 'pregnancy' from the keywords. Since the first patient was a male, this might be misleading to readers.	This term has been removed.
2. Reconsider the term "proportionate tachycardia"... (excessive tachycardia, relative to the degree of fever ??)	The terminology has been changed.
3. "defervesced" - become afebrile?	The terminology has been changed as advised.
Reviewer 2	
Some novelty and new published information is needed.	There is no novelty. But it is rare considering the incidence of typhoid fever. 9/17 references are from the last 5 years
