### **SPECIFIC COMMENTS TO AUTHORS**

Thanks to the authors for providing insights on the current and prospective future state of kidney transplantation in Greece. The concepts highlighted in the manuscript are topical and of great interest to the global transplant community owing to the chronic shortage of kidney allografts across the world. The authors also elude to important issues that face the expansion of living kidney donation in general and offer some insights into novel options that are being explored within their local context in order to potentially address these. While it is generally well written, I would advise some revisions to sentence structure and use of grammar to improve readability - the sentences are often long and include multiple parenthesis. I would suggest to shorten sentence structure and revise use of grammar to facilitate ease of comprehension of the points discussed. There are also some aspects which require further clarification. These include: 1. The authors elude to some cultural beliefs towards living kidney donation in the Greek population - I would suggest to more clearly outline what these are, how they compare to population groups elsewhere in the world and how these beliefs impact on transplantation rates in the local population. This would offer the reader unique insights into the cultural aspects underlying living donor transplantation in Greece. 2. Age limits to transplantation in Greece are mentioned. What are the age limits applied to transplantation in Greece? Do the authors think that these are justified and in what context would expansion of transplantation beyond these limits be considered? 3. Risks of ABO/HLA incompatible transplants - would advise to explore what these are in order to justify paired organ donation/donor chains as the superior alternative where possible 4. The authors mention novel mechanisms by which living kidney donation can potentially be expanded in Greece. I suggest

**https://**www.wjgnet.com

specifically stating how they propose these mechanisms can be developed within their local context. This can be referenced against how these mechanisms have been utilized effectively in other parts of the world. 5. What do the authors think are relevant future research directions that may be valuable to advocate for the expansion of living kidney donation in Greece/other populations? Some recommendations to improve other aspects in the manuscript include: 6. I suggest to expand upon the abstract to provide the reader with a broader overview of concepts discussed in the manuscript-more than 200 words as outlined in the journal guidelines 7. Would include more references to current literature to justify statements or draw comparison between transplantation in Greece as compared to other settings. For example, the concepts described throughout the introduction require appropriate referencing - the authors list numerous advantages/disadvantages of living kidney donation as compared to deceased donation. This requires appropriate referencing to current literature which supports this. As an additional example, when discussing the role of reducing financial barriers to living donation, the American Society of Transplantation needs to be appropriately cited 8. The last paragraph under the heading of 'future prospects'- I would suggest to separate this into a 'conclusions' section and provide a stronger closing statement

#### **SPECIFIC COMMENTS TO AUTHORS**

In this review article the authors discuss about the state of living donor kidney transplantation in Greece. The manuscript does not give any information on facts such as number of kidney transplantation performed in Greece yearly and overall trend. It is important to provide country specific data which will be useful for the readers.
