SPECIFIC COMMENTS TO AUTHORS

Suboptimal manuscript. Figures esp. Endoscopy ones need to be of better quality. Case report has not been in WJG style/protocol. In Discussion you need to add one full paragraph regarding unusual clinical scenario of spontaneous biliary rupture and it's clinical presentations spectrum. Add two important recent references regarding spontaneous biliary rupture or perforation from India.....Amit Soni et al, J Gastroenterol Hepatol 2015 and Sanjeev Sachdeva et al, Indian J Gastroenterol 2021. English language also needs to be improved.

SPECIFIC COMMENTS TO AUTHORS

This article reports a rare case of phlegmonous gastritis after biloma drainage. However, similar cases have been reported for the last few decades. The content is not rich enough in the discussion section. I would like to suggest that it is necessary to add some new knowledge in the discussion or emphasize the uniqueness of your case. In addition, I have the following comments: 1. It has been mentioned in the literature that phlegmonous gastritis can be classified as one of two types depending on the extent of the disease: diffuse and localized, and gastric wall abscess is a localized form of phlegmonous gastritis. What is your opinion on this classification? And all of the cases belong to diffuse form of phlegmonous gastritis in your article? 2. It would be worth adding the literature of other risk factors of PG, such as ESD, EMR, ERCP and so on. 3. When were the EGD and abdominal CT reviewed after discharged from hospital? Please state in the article. 4. Endoscopic ultrasonography for phlegmonous gastritis diagnosis is reportedly effective. Please discuss the role of endoscopic ultrasonography in the diagnosis of this disease if possible. 5. Please add the differential diagnosis (scirrhous gastric cancer or acute gastric mucosal lesion?) and overall prognosis (complications or recurrence after discharge?) of phlegmonous gastritis in the discussion section. 6. Surgery should always be considered in refractory cases and in the presence of complications. Please try as much as possible to describe in detail the role of the surgery in the treatment of this condition.
