

# PEER-REVIEW REPORT

Name of journal: World Journal of Transplantation

Manuscript NO: 80235

Title: Transitioning of renal transplant pathology from allograft to xenograft and tissue

engineering pathology: are we prepared?

Provenance and peer review: Invited Manuscript; Externally peer reviewed

Peer-review model: Single blind

**Reviewer's code:** 03475330 **Position:** Peer Reviewer

Academic degree: MD, PhD

Professional title: Professor, Surgeon

Reviewer's Country/Territory: Japan

Author's Country/Territory: Pakistan

### SPECIFIC COMMENTS TO AUTHORS

Comments to the Author The manuscript entitled "Transitioning of renal transplant pathology from allograft to xenograft and tissue engineering pathology: are we prepared? " has been reviewed. Unfortunately, I have concluded that the findings presented in this manuscript are not new or incomplete. ·I agree with the author that it would become a topic of review manuscript since xenotransplantation for kidney was performed in last year. ( N Engl J Med. 2022 May 19;386(20):1889-1898.) However, the manuscript the author prepared has no description about the transplant nor tissue I also recommend the author to have some comments for pigs that are generated by Revivicor.

# SPECIFIC COMMENTS TO AUTHORS

Very interesting topic, very nicely prepared manuscript. A much needed aspect of transplant medicine which is adequately explained.

# SPECIFIC COMMENTS TO AUTHORS

A useful and timely review to let the scientific community know about the latest evolution on the xenotransplantation field. I would recommend some revisions: 1)The status of histopathology in XenoTx is more or less similar to its status in allotransplantation (alloTx). I would say that it is less developed, specifically because there is no an extensive literature. 2) Chronic rejection: I would suggest the author to develop more this section, also in comparison to the other paragraphs.
