SPECIFIC COMMENTS TO AUTHORS

The Authors present the results of a very large study on the NIS database to identify outcomes of non-variceal upper gastrointestinal bleeding in NAFLD hospitalizations in the US. The dataset was very-well analyzed and, also given the very high number of patients evaluated, the results have major relevance for clinical practice. Well done! A couple of minor comments: - can the Authors comment on the generalizability of the results (e.g., healthcare utilization costs, but not only) outside the US? - the use of English language is very clear and personally I like it (and I am a non-native English, therefore I'm feeling a bit awkward in saying this), but sometimes it is not in line with the current standards of scientific literature. can the Authors revise the paper in terms of style?
