SPECIFIC COMMENTS TO AUTHORS

The article reviewed the ABCDEF bundle, music therapy and adjustment to patient ventilator asynchrony systematically. However, the recent RCTs researches were not reviewed, which may futher enhance the article quality.

SPECIFIC COMMENTS TO AUTHORS

I read with interest this well-written minireview on an important topic that is at the crossroads of general surgeons and physicians and critical care experts. The irony is most of the after-ICU follow-up is not done by critical care experts. Thus they do not receive first-hand information of the patient once discharged from ICU, unless an active effort to follow up is made. Thus, it is not a surprise that most citations are borrowed from prospective trials published in high-impact journals. I have minor suggestions for authors and i wish that author include some discussion about the data rather than data itself. 1. In abstract please underline or bold the ABCDEF alphabet in the description as appropriate. e.g. "a" of awakening to be made bold etc. 2. Key words should be in alphabetical order 3. ICU full form should be mentioned when it is first mentioned 4. Citation 1 is wrong. edit it pls. 5. Opening introductory statement is very obvious and you dont need to support it with 3 NEJM papers. One is sufficient as it is common domain knowledge that things have improved etc. 6. Page 8 need to mention ICU short form rather than full 7. Citation 19 findings should be discussed by author. Just mentioning data is not sufficient. Why deeply sedated patients have worse memories and PTSD compared to contrary expectations by logic? 8. Page 17 last line likelihood and not likehood 9. When you write para on abcdef bundle, there is no "f". This is likely due to lack of good quality data. So in essence your ABCDEF is actually just ABCDE and there is no F? Pls elaborate.

SPECIFIC COMMENTS TO AUTHORS

The mini-review is well-written. The topic is interesting. However, there are many minor and a few major issues that must be resolved before it is published. All of them are included at the file attached to my review. Please have a look and make corrections. In more detail, 3 sections, the introduction, the D- delirium detection, management and prevention paragraph and patient-ventilator asynchrony adjustment paragraph must receive changes. The last one should be omitted or extensively changed as it has little to do with the subject of the review and its reference to patient-ventilator asynchronies is basic / superficial. English edditing would offer improvement to the manuscript, although many changes are proposed at my attached revision. The effort is good.

SPECIFIC COMMENTS TO AUTHORS

Manuscript is improved. Minor faults still remain but I hope that they will be resolved at the Proofreading process. Not all proposed changes were adopted by the author, but the most important were. In fact, I believe that the authors' point of view must be respected when there is no major drawback for the manuscript's quality.
