SPECIFIC COMMENTS TO AUTHORS

Dear authors, The article represents the review with a focus on diagnosis and management of superior mesenteric artery syndrome. The article is written with the good English-speaking adduction of the arguments. The article is sufficiently novel and very interesting to warrant publication. All the key elements are presented and described clearly. The most discussable options in the article are: 1) Would you please kindly correct all your typos and grammar errors throughout the manuscript. 2) I would generally suggest to elaborate on more information about possible therapy including surgery. It is well-known that there is no relevant guidelines but it might be nice to gather all the information that might be of importance.

SPECIFIC COMMENTS TO AUTHORS

This is a well-written review about the Superior Mesenteric Artery Syndrome (SMAS). The author involved all the relevant topics and also included personal radiologic imaging with endoscopic imaging. Furthermore, the drafting imaging of the SMAS is extremely well described. The main flaw about this syndrome is the lack of relevant data about the right timing for the surgical approach after conservative treatment fail, which was well described in the text.
