### SPECIFIC COMMENTS TO AUTHORS

The article updates information about the GSD extensively. However the presentation could have been made more appealing. Introduction lacks description about age group affected, clinical relevance, management issues, need for Multi disciplinary team management, need for surgery etc. and the commonalities of types of GSDs and how they differ among themselves. The GSD types (it is said that there are over 20 types of GSD), could have been classified based on genetic defects, enzymes that are defective, organ affected, incidence, management, and prognosis, etc.; but are enumerated as per serial number. So also similar types are not grouped together and their similarities and differences are not alluded to. Hence very minimal information alone could be provided for types IX to XV. No information is provided about type XIV In the list of involved organs brain is also added, though the neurological manifestations are not due to enzyme deficiency in the said organ In table 1 the columns have no headings and lacks information. Fig-1 do find one sentence in introduction and again left to be interpreted by the reader, including deciphering the abbreviations. It is informed that the aim of the article is to provide comprehensive information about GSDs, especially those with

#### **SPECIFIC COMMENTS TO AUTHORS**

Thanks for revising the article based on the reviewers comments. 1. However the changes made to the article are not highlighted in the revised article and has to be searched for. 2. The authors prefer to only enumerate the different GSD types by Roman numerals but has not made any attempt to classify them leaving the task to the reader. 3. The tables and figure are separately given rather than incorporated in the article.
