

Response to Review Comments

No	REVIEW COMMENTS	AUTHORS' RESPONSE
Reviewer #1	Authors reviewed the significance of music therapy in treating depression and anxiety disorders among patients with cancer. I recommend the following additions: 1. There are a few typos or small grammar issues. Please carefully check those during the revision process. 2. Introduction has too much words, please refine it. 3. The title does not match the content accurately, it is recommended to change the title. 4. The table is not easy to read.	Dear reviewer, many thanks for your comments. We have made the recommended corrections. The grammatical errors were reviewed and addressed. The introduction was slightly reduced. The title has been adjusted to match the content of the paper. The 'not easy to read table' was also addressed.
Reviewer #2	1."a psychological disorder affecting people with cancer can be linked to structural-level indicators such as availability, access, and utilization of healthcare services for the treatment of cancer, as well as the provision of welfare packages for people with cancer ", why author thought psychological disorder is a structural-level indicators? 2."Treating depression and anxiety disorder using music therapy involves qualified music therapists employing music as a supplementary or holistic therapeutic solution". If needs qualified music therapists, how about treatment cost, Economics and professionals? 3."Clinicians should consider using music therapy as the approach has many beneficial effects in improving the mental health of people with cancer. "How does the clinician make that judgment? 4.The standardized procedures and evaluation criteria for the application of music-based intervention strategies in oncology medicine still need to be established and further improved. 5.The whole review does not carry on the in-depth discussion,	Many thanks for your detailed review comments. We have clarified that the psychological disorders affecting people with cancer could be linked to some of the listed structural-level indicators because cancer has some sort of financial implication on the patients, which influences the development and treatment of depression and anxiety in cancer patients. In addition to music therapy involving qualified music therapists, the approach is cheap and without side effects as shown by studies referenced in the manuscript. It is significantly beneficial in addressing psychological stress among cancer patients. Necessary adjustment has been made in the manuscript to include your recommendations.

Science Editor (3)	<p>the feeling is just the synthesis of literature.</p> <p>The manuscript has been peer-reviewed, and it's ready for the first decision. Language Quality: Grade B (Minor language polishing) Scientific Quality: Grade C (Good)</p>	<p>Thank you so much for your comment. The language of the manuscript has undergone minor polishing as you recommended.</p>
Company Editor-In- Chief (4)	<p>Authors are advised to apply a new tool, the RCA. RCA is an artificial intelligence technology-based open multidisciplinary citation analysis database. In it, upon obtaining search results from the keywords entered by the author, "Impact Index Per Article" under "Ranked by" should be selected to find the latest highlight articles, which can then be used to further improve an article under preparation/peer-review/revision. Please visit our RCA database for more information at: https://www.referencecitationanalysis.com/.</p>	<p>Thank you for your comment. The authors adhered to your advice and have made the necessary changes. Searches using the keywords were conducted and some articles were retrieved from the RCA database for more information at: https://www.referencecitationanalysis.com/ to improve the manuscript revision.</p>
