

Reviewer 1:

Very well thought out study and analysis

The authors thanks the reviewer for his comment.

Reviewer 2:

Review on manuscript, "Assessing the Readability of Online Information About Jones Fracture" I think the topic of study is interesting. However, I suggest that authors consider the following points:

1. I suggest authors add a list of abbreviations at the end of the manuscript.
  - This has been added accordingly
2. There is no caption for Figure 2.
  - This has been added accordingly
3. The authors should recheck the Inclusion and Exclusion section for the number they reported(108-8 ≠94).
  - The authors have rechecked this section. This has been amended accordingly in the last submitted manuscript.
4. Throughout the manuscript, the titles of figures should be at the bottom and tables at the top, (see Tables 1-3 and Figure 1-2).
  - This has been amended accordingly.
