

## The ARRIVE Guidelines Checklist

## Animal Research: Reporting In Vivo Experiments

Carol Kilkenny<sup>1</sup>, William J Browne<sup>2</sup>, Innes C Cuthill<sup>3</sup>, Michael Emerson<sup>4</sup> and Douglas G Altman<sup>5</sup>

<sup>1</sup>The National Centre for the Replacement, Refinement and Reduction of Animals in Research, London, UK, <sup>2</sup>School of Veterinary Science, University of Bristol, Bristol, UK, <sup>3</sup>School of Biological Sciences, University of Bristol, Bristol, UK, <sup>4</sup>National Heart and Lung Institute, Imperial College London, UK, <sup>5</sup>Centre for Statistics in Medicine, University of Oxford, Oxford, UK.

	ITEM	RECOMMENDATION	Reported on page #
Title	1	Provide as accurate and concise a description of the content of the article as possible.	Page 1, Line 6-8
Abstract	2	Provide an accurate summary of the background, research objectives, including details of the species or strain of animal used, key methods, principal findings and conclusions of the study.	Page 3-4, Line 52-96
NTRODUCTION			
Background	3	<ul> <li>a. Include sufficient scientific background (including relevant references to previous work) to understand the motivation and context for the study, and explain the experimental approach and rationale.</li> <li>b. Explain how and why the animal species and model being used can address the scientific objectives and, where appropriate, the study's relevance to human biology.</li> </ul>	Page 5, Line 117-135 Page 5, Line 123-125
Objectives	4	Clearly describe the primary and any secondary objectives of the study, or specific hypotheses being tested.	Page 6, Line 158-160
METHODS			
Ethical statement	5	Indicate the nature of the ethical review permissions, relevant licences (e.g. Animal [Scientific Procedures] Act 1986), and national or institutional guidelines for the care and use of animals, that cover the research.	Page 8, Line 208-212
Study design	6	For each experiment, give brief details of the study design including:  a. The number of experimental and control groups.  b. Any steps taken to minimise the effects of subjective bias when allocating animals to treatment (e.g. randomisation procedure) and when assessing results (e.g. if done, describe who was blinded and when).  c. The experimental unit (e.g. a single animal, group or cage of animals).  A time-line diagram or flow chart can be useful to illustrate how complex study designs were carried out.	Page 8, a: Line 223-225 Line 231-233 b: Line 224, 231 228-230, 238- c: group, Line 22 Figure 2
Experimental procedures	7	For each experiment and each experimental group, including controls, provide precise details of all procedures carried out. For example:  a. How (e.g. drug formulation and dose, site and route of administration, anaesthesia and analgesia used [including monitoring], surgical procedure, method of euthanasia). Provide details of any specialist equipment used, including supplier(s).  b. When (e.g. time of day).  c. Where (e.g. home cage, laboratory, water maze).  d. Why (e.g. rationale for choice of specific anaesthetic, route of administration, drug dose used).	a,b,c: Page 8-9, Line 215-23 Figure 2 d: Page 8, 9 Line 214,229,
Experimental animals	8	<ul> <li>a. Provide details of the animals used, including species, strain, sex, developmental stage (e.g. mean or median age plus age range) and weight (e.g. mean or median weight plus weight range).</li> <li>b. Provide further relevant information such as the source of animals, international strain nomenclature, genetic modification status (e.g. knock-out or transgenic), genotype, health/immune status, drug or test naïve, previous procedures, etc.</li> </ul>	a,b: Page 8, Line 205-20

Housing and	9	Provide details of:	
husbandry	C	<ul> <li>a. Housing (type of facility e.g. specific pathogen free [SPF]; type of cage or housing; bedding material; number of cage companions; tank shape and material etc. for fish).</li> </ul>	a b as Dama 9
		<ul> <li>b. Husbandry conditions (e.g. breeding programme, light/dark cycle, temperature, quality of water etc for fish, type of food, access to food and water, environmental enrichment).</li> </ul>	a,b,c: Page 8, Line 205-208
		<ul> <li>Welfare-related assessments and interventions that were carried out prior to, during, or after the experiment.</li> </ul>	
Sample size	10	a. Specify the total number of animals used in each experiment, and the number of animals in each experimental group.	
		<ul> <li>Explain how the number of animals was arrived at. Provide details of any sample size calculation used.</li> </ul>	a,b: Page 8, Line 221-222
		<ul> <li>c. Indicate the number of independent replications of each experiment, if relevant.</li> </ul>	c: see figure legen
Allocating animals to	11	a. Give full details of how animals were allocated to experimental groups, including randomisation or matching if done.	a,b: Page 8-9, Line 213-239
experimental groups		<ul> <li>Describe the order in which the animals in the different experimental groups were treated and assessed.</li> </ul>	Figure 2
Experimental outcomes	12	Clearly define the primary and secondary experimental outcomes assessed (e.g. cell death, molecular markers, behavioural changes).	Page 14-17 Line 407-493
Statistical	13	a. Provide details of the statistical methods used for each analysis.	G logo
methods		<ul> <li>Specify the unit of analysis for each dataset (e.g. single animal, group of animals, single neuron).</li> </ul>	b: see figure lege a,c: Page 13,
		<ul> <li>Describe any methods used to assess whether the data met the assumptions of the statistical approach.</li> </ul>	a,c: Page 13, Line 351-35'
RESULTS			
Baseline data	14	For each experimental group, report relevant characteristics and health status of animals (e.g. weight, microbiological status, and drug or test naïve) prior to treatment or testing. (This information can often be tabulated).	Page 8 Line 214
Numbers analysed	15	<ul> <li>Report the number of animals in each group included in each analysis.</li> <li>Report absolute numbers (e.g. 10/20, not 50%<sup>2</sup>).</li> </ul>	a: see figure legend
		b. If any animals or data were not included in the analysis, explain why.	b: all the animals were included
Outcomes and estimation	16	Report the results for each analysis carried out, with a measure of precision (e.g. standard error or confidence interval).	see figure legend
Adverse events	17	a. Give details of all important adverse events in each experimental group.	1. Dans Q
		b. Describe any modifications to the experimental protocols made to reduce adverse events.	a,b: Page 8 Line 217-220
DISCUSSION			
Interpretation/ scientific	18	<ul> <li>a. Interpret the results, taking into account the study objectives and hypotheses, current theory and other relevant studies in the literature.</li> </ul>	a: Page 19-22 Line 556-640
implications		<ul> <li>b. Comment on the study limitations including any potential sources of bias, any limitations of the animal model, and the imprecision associated with the results<sup>2</sup>.</li> </ul>	b: Page 22, Line 618-627
		c. Describe any implications of your experimental methods or findings for the replacement, refinement or reduction (the 3Rs) of the use of animals in research.	c: Page 8, Line 210
Generalisability/ translation	19	Comment on whether, and how, the findings of this study are likely to translate to other species or systems, including any relevance to human biology.	Page 22, Line 634-640
