

Respected panel members,

We would like to thank the peer reviewers for taking out for their busy schedules to review our manuscript. Based on the reviewers comments, the following changes were made.

- 1) Based on the reviewers suggestions and interpretations, we have expanded on the pathophysiology of lidocaine and malignant hyperthermia. The discussion now further dwells into how this case report emphasis on the core tip from this paper being applied to daily clinical practice given the wide applications of lidocaine. The aspect of lidocaine being able to cause MH even though it being an amide earlier believed to not have the capability of causing the same is the new knowledge provided to the reader. Regarding this rare but possible finding in a clinical setting.
- 2) We would like to thank the second reviewer for aligning his feedback to what the paper intended to encapsulate. Regarding the dangerous effects of this side effect going undiagnosed.
