Language Quality: Grade A (Priority publishing)

Conclusion: Accept (High priority)

Specific Comments to Authors:

I must congratulate the authors for their efforts in writing this manuscript. Esophageal duplication cysts are a rare entity encountered during surgical practice; authors to share pre-operative radiology images including those of CT neck if done. What is the biopsy report? Detailed intra-operation photo if available.

Reply:

1. We did not perform a neck CT scan on the patient before the surgery, so we cannot provide the radiology images.

2. The biopsy report: the cyst wall is ciliated columnar epithelial, the images (**Figure 5**) in the PowerPoint file '86863-Figures.pptx'.

3. Detailed intra-operation photo: We didn't take any photos of the first surgery. Photos taken during the second surgery (**Figure 4**) in the PowerPoint file '86863-Figures.pptx'.
