SPECIFIC COMMENTS TO AUTHORS

1- The current article's title should be rewritten to reflect the goal for which the current study was conceived and conducted. 2- The informative balance must be maintained between the various sections of the study abstract. 3- Only the most important findings of the current study should be presented in the results section of the current study abstract. 4- I hope the author(s) will use recent references in the MRI acquisition section that substantiate what the researcher/researchers said in this line. 5- The final paragraph of the discussion section should be devoted to assessing the present study's merits and flaws, as well as outlining the current study's future directions. 6- Please specify in the conclusion section whether the current study met its aims, i.e. whether the research topic was solved. 7- Some references are outdated and should be replaced with more recent ones. It would be ideal if the usage of references were between the year 2023 and five years previously.
