SPECIFIC COMMENTS TO AUTHORS

Here are some of my tips: 1. Dilation of the gastrojejunal anastomosis (GJA) is the main cause of RYGB's post-operative weight recurrence and one of the mechanisms of TORe, so it would be better to include GJA in keywords. 2. Provide more specific data and statistics: When referring to RYGB's weight loss and recurrence rates, more specific data and statistics can be provided to increase the accuracy and credibility of the information. 3. The article "Five-year outcomes of transoral outlet reduction for the treatment of weight regain after Roux-en-Y gastric bypass" have shown that almost all of the patients with TORe stopped gaining weight 3 or even 5 years after surgery, and most of them showed clinically significant weight loss. Therefore, can we consider extending the measurement time of TBWL and EWL to 5 years? 4. Could you elaborate further on how community setting deal with complications after TORe surgery in large hospitals? 5. Could you design a learning curve or process of TORe for other community settings to learn from?
