

Specific Comments to Authors: Whether Genetic study was done in this case If yes please mention in manuscript Brief about the gene therapy availability Follow up investigation, brief

Our response: The case in this article underwent sequencing of the associated LAMP2 gene and the NM_002294.2:c.928G>A (p.Val310Ile) variant was detected, with the gene subregion EX7/ CDS 7. Although there is currently no specific gene therapy to DD, adenovirus-mediated delivery of a functional LAMP2B transgene has been achieved in mice, and the efficacy is being tested in male adolescent patients with DD.

JOURNAL EDITORIAL BOARD COMMENTS TO AUTHORS

A rare clinical case presented by the authors with adequate description of their approach in this case. Grammatical errors must be fixed before publication. Give exact patient age.

Response: We have fixed some grammatical errors according to your request. The exact age of the patient has been entered into the manuscript. Please feel free to contact me.
