Polystyrene Sulfonate Induced Colitis: a Systematic review

Authors: Gabriel Peixoto Aver, Guilherme Ferreira Ribeiro, Vinicius Remus Ballotin, Francisco Souza dos Santos, Lucas Goldmann Bigarella, Floriano Riva, Eduardo Brambilla and Jonathan Soldera.

Response to Reviewers

Reviewer 1

This article is informative and well presented. However, the purpose of this paper was not clear, and the results did not clarify the risks and benefits of this drug. It is not impressive as a meta-analysis paper. On the other hand, this paper clarified the current status of polystyrene sulfonate-induced colitis and deserves evaluation. Please confirm consistency of aims, results, and conclusions. Because the authors described in Abstract "This paper aims to conduct a systematic review of documented cases of SPS-induced colitis and assess its associated prognosis". Please describe the prognosis in Discussion or Conclusions.

We appreciate your input on our paper and we hope we can solve the suggestions accordingly.

Response to Editors

We thank you for the input and the opportunity for improving our manuscript. We hope we have corrected every shortcoming accordingly, as we state below.

1. The authors have experience with statistical analysis and simple describe analysis was performed;
2. We have prepared and arranged the figure into the PowerPoint file with the appropriate copyright;
3. We have adjusted the tables according to the recommended specifications.

JOURNAL EDITORIAL BOARD COMMENTS TO AUTHORS

The title should be more detailed in order to display the main purpose and content of this system review.

Answer: A Comprehensive Analysis of Sodium Polystyrene Sulfonate-Induced Colitis: A Systematic Review
