SPECIFIC COMMENTS TO AUTHORS

This manuscript is an editorial article that summarized the latest knowledges regarding the clinical application of polyglycolic acid (PGA) sheets for the treatment of esophageal stricture after esophageal endoscopic submucosal dissection. This article contains informative knowledges for readers. The following minor issues require clarification: Minor 1. (Abstract, P2L2-4) “Endoscopic submucosal dissection (ESD) is widely used for early esophageal cancer resection because early diagnosis and treatment of esophageal cancer can significantly reduce morbidity and mortality.” This sentence sounds strange. Reconsider the reasons why ESD is widely used. 2. (Core tip) “Since esophageal stenosis is a common complication after esophageal ESD.” This sentence is incomplete.
