PEER-REVIEW REPORT

Name of journal: *World Journal of Clinical Cases*

Manuscript NO: 88595

Title: Post-trans-arterial chemoembolization hepatic necrosis and biliary stenosis:
Clinical characteristics and endoscopic approach

Provenance and peer review: Invited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 02936735

Position: Editorial Board

Academic degree: MD, PhD

Professional title: Professor

Reviewer's Country/Territory: China

Author's Country/Territory: Italy

Manuscript submission date: 2023-11-09

Reviewer chosen by: AI Technique

Reviewer accepted review: 2023-11-10 00:09

Reviewer performed review: 2023-11-11 10:39

Review time: 1 Day and 10 Hours

SPECIFIC COMMENTS TO AUTHORS

The report by Silvia Cocca, et al. described a complication after trans-arterial chemoembolization (TACE), post-TACE hepatic necrosis and biliary stenosis. This complication is relatively rare, and it is very important for clinicians to consider how it is early diagnosed and treated. The present report is an interesting case. However, several issues requested to be addressed. 1. Please provided detailed clinicopathological information and following-up information. 2. Figures. All figures are too rough and please describe them in figure legends. Also, All figures need to be cited in the content. 3. Please unify abbreviations, ex. HCC represents hepatocarcinoma or hepatocellular carcinoma.
