## SPECIFIC COMMENTS TO AUTHORS

Although the current mainstream of medicine is still in the era of evidence-based medicine, the value of clinical case reporting and research is still very important, especially for some new and rare diseases that are difficult to conduct evidence-based medicine research. Case studies are of great significance for doctors to understand this disease. The author systematically describes the types and significance of case studies, which has certain guiding significance for clinical practice. However, the format of the article does not meet the requirements of the magazine. It is recommended to revise it and accept it.
