The manuscript has been improved according to the suggestions of reviewers:
1 Format has been updated

2 Revision has been made according to the suggestions of the reviewer

Reviewer's comments: Authors did attempt to address an important issue. Feel can be better if they include peto plot to show the CI for the Meta analysis. Also it would be good to have the tables of different studies so readers can review different studies and the number of subject and common findings at a glance

Responses:

(1) The corrections which have been mentioned in the manuscript have been corrected.

(2) Peto plot has been added in the manuscript.

(3) The table 1 has been edited according to the reviewer suggestion.

(5) References and typesetting were corrected. All the references have been revised, PMID and DOI have been mentioned and the entire authors' names have been mentioned in each reference. The first page of the papers have provided also.
