

## ANSWERING REVIEWERS

May 11, 2014

Dear Editor,

Please find enclosed the edited manuscript in Word format (file name: 10588-edited.doc).

**Title:** Virtual colonoscopy in combination with large bowel endoscopy: Clinical application

**Author:** Qing He, Ting Rao, Yong-Song Guan

**Name of Journal:** *World Journal of Gastroenterology*

**ESPS Manuscript NO:** 10588

The manuscript has been improved according to the suggestions of reviewers:

1 Format has been updated

2 Revision has been made according to the suggestions of the reviewer

(1) This is well written review about CRS. I think you should split the population high risk and average risk. colonoscopy must perform in high risk population. Because CT/MR colonography may miss small polyp or lesion. In the text you must discuss this subject.

**Thank you very much for your positive comment. Discussion has been made to separate the population of high risk from average risk, and to include the drawbacks of CT/MR colonoscopy for missing small lesions.**

(2) Minor comment Authors should put in the image of MRC and PET/CT colonography.

**Image of PET/CT colonoscopy is put in the article as figure 3.**

3 References and typesetting were corrected

Thank you again for publishing our manuscript in the *World Journal of Gastroenterology*.

Sincerely yours,

**Yong-Song Guan**
