

Dear Editor of World Journal of Clinical Cases,

We thank the reviewers for judging our article “Proteinuria in paediatric patients with HIV infection” interesting for your Journal.

As requested we made some corrections in the review format:

- we modified the acronymous HIV in the title
- we added the running title
- we provided the author contributions and the professional title of corresponding author with telephone and fax number
- we added keywords
- we added Pubmed citation numbers and DOI citation to the reference list and listed all authors.

Regarding the reply to reviewers’ comments, the aim of our mini review was the management of early diagnosis of proteinuria, so we did not focus neither on therapeutic management neither on the progression to end stage renal disease. We mentioned that proteinuria is correlated with loss of renal function and also that HIV viral load is correlated with proteinuria and the progression to end stage renal disease.

Thank you for considering our review.

Please, don't hesitate to contact me for any issues you might have.

With best regards,

Vania Giacommet and collaborators
