To Whom it May Concern

This is to certify that I, Dr. Silke Cameron, Department of Gastroenterology and Endocrinology, University Medical Center Göttingen, Germany, have – as a near-to native English speaker - read and approved of the manuscript entitled “Predictability of IL-28B-polymorphism on protease-inhibitor-based triple-therapy in chronic HCV-genotype-1 patients: a meta-analysis”.

I found the manuscript well structured, grammatically correct and with well defined punctuation. I recommend this paper for publication in an international journal.

Dr. Silke Cameron
