

September 22, 2014

Dear Editor,

Please find enclosed the edited manuscript in Word format (file name: 12394-review.doc).

**Title:** Adalimumab-induced interstitial pneumonia in a patient with Crohn's disease

**Author:** María José Casanova, María Chaparro, Claudia Valenzuela, Carolina Cisneros, Javier P. Gisbert

**Name of Journal:** *World Journal of Gastroenterology*

**ESPS Manuscript NO:** 12394

The manuscript has been improved according to the suggestions of reviewers:

1 Format has been updated

2 Revision has been made according to the suggestions of the reviewers

(1) Reviewer N° 2546019:

We have included the reference of Perez-Alvarez et al. Also, we have underlined that an exhaustive investigation to exclude other diagnosis should be done. Finally, we have developed in the discussion the strategy of switching anti-TNF drug. You can see all the changes highlighted in the text.

(2) Reviewer N° 214225:

We agree with all the reviewer suggestions. As the reviewer suggested, we have discussed the mechanisms by which anti-TNF drugs can induce lung toxicity. Besides, the radiological findings have been included (The chest X-ray and the high resolution tomography). We have also eliminated the term cryptogenic.

(3) Reviewer N° 1221849:

We regret that the reviewer think that our case report do not provide any new and interesting point to the gastroenterologists. However, we have introduced the suggested changes. We have explained why we think that the rechallenge or the use of another anti-TNF should be discouraged. You can see the explanation developed in the discussion.

3 References and typesetting were corrected

Thank you again for publishing our manuscript in the *World Journal of Gastroenterology*.

Sincerely yours,

María José Casanova, MD, PhD
