

Figure Formatting Summary Document

Client: Dr. Hailin Li

Manuscript: Impact of transarterial chemoembolization (TACE) before liver transplantation and Poor Prognostic Factors for Patients with hepatocellular carcinoma: Retrospective Analysis of 204 Patients

Summary Prepared on: September 20, 2014

Congratulations on taking a step forward in your publication goals!

The goal of this report is to present the figures that we have prepared for your manuscript at publication size, highlighting any changes that we have made. In the formatting process we adjust the figures to meet the specifications of your chosen journal, or use the most widely-applicable specifications if you have not yet chosen a journal. We do this in the least disruptive manner possible to maintain the original character of the figure while enhancing the readability and presentation of the data.

Below we have provided instructions regarding the review of your figures and the stated technical figure specifications for the journal to which you are submitting. On subsequent pages we have provided the formatted figures with the illustrator's comments.

Instructions:

Please carefully review the formatted figures on the following pages. We often correct issues with grammar, word usage, and misspellings when we encounter them in figures, so please check the text carefully to ensure that any changes that we have made are correct. Please read and consider any additional comments from the illustrator. All of our illustrators are published scientists, and they can often help you identify and solve problems before the manuscript is sent to editors and reviewers.

If any mistakes have been made or there are any additional changes you would like to make to the figures, please contact us immediately at figures@journalexperts.com. In order to facilitate the process, we encourage you to paste the figure into a PowerPoint slide or Word document and use the drawing tools and textboxes to identify and describe the changes that you would like made to the figure, and attach this file to the email.

The figures included in this document are for review purposes only, and the files included with this report ("Figure 1.tif", "Figure 2.tif", etc.) are the actual files that you will upload to the journal. Please note that figures in this document are not at full resolution, so the individual figure files should be viewed if you have any concerns regarding resolution.
