Dear editor:

Please find enclosed the reviewed manuscript in Word format (file name: ESPS Manuscript No.1262-Review.doc).

Title: Splenic lymphangioma that manifested as a solid-cystic mass: A case report

Author: Fan Yang, Weixia Chen

Name of Journal: *World Journal of Gastroenterology*

ESPS Manuscript NO: 1262

The manuscript has been improved according to the suggestions of reviewers and editors:

1. Language certificate letter by professional English language editing companies will be sent to the editor on next Wednesday (December 19).
2. The manuscript has been typed in 1.5 line spacing and 12 pt. Book Antiqua with ample margins.
3. Running title, authorship, author contributions, telephone and fax number have been added to the manuscript.
4. The abstract and key words have been updated.
5. The "unique" findings in instruction part has been updated to moderate description.
6. We have changed "cholecystolithiasis" to "gall bladder lithiasis", "with clear borderline" to "with sharp borders".
7. We are sorry to inform that we don't have the US findings, because the patient underwent US at another hospital.
8. Splenectomy was undertaken for splenic mass, because the clinic features related to the mass didn't support inflammation of the spleen.
9. We have clarified that there is no real "solid" component histopathologically but to the dilated sinuses, and the mass just manifested as a "solid-cystic" lesion in CT images.
10. PubMed citation numbers and DOI citation have been renovated to references.
11. The format of figures were corrected.

Thank you again for publishing our manuscript in the *World Journal of Gastroenterology*.

Sincerely yours,

Fan Yang
