

Biostatistics statement

The statistical methods of the study entitled "Protective Effect of Fu-qi Granule on CCl₄-induced Liver Fibrosis in Rat" were reviewed by professor Zheng-Man Wei from 302 Military Hospital of China. The results are expressed as the mean \pm SD. Measurement data were analyzed using one-way analysis of variances (ANOVA, SPSS 20.0). Differences with $p < 0.05$ were considered statistically significant. These data in the study are authenticity and reliability.
