COMMENTS TO AUTHORS

REVIEWER (503623)

This study reports on the comparison of methods for the closure following ER for duodenal tumors. The conclusion is that the ulcer under 20 mm should be closed using conventional clip technique, whereas the craters greater than 20 mm should be closed utilizing the OTSC technique. The presentation is lucid, well illustrated, and quite informative. Overall, good job!

Response

It's my honor for me to be commented by REVIEWER(503623) with such a wonderful compliments. Thank you very much.

Sincerely yours,

Hirohito Mori, M.D, PhD
