(1) **Comments:** "METHODS: In which way did you choose a patient for Laparoscopic or Open APR? "

Response:

The present study enrolled patients from March 2009 to December 2013 in our center. Laparoscopy was introduced into our center in February 2009. Patients was evaluated fit for laparoscopy

according to previous abdominal surgery, ASA score, BMI and patients individual preference. Laparoscopic APR gained its popularity from 2011, not only in our center but also worldwide. Therefore, the number of laparoscopic APR is more prominent after 2011. Whereas, more open APRs were performed before 2011.

- (2) "In follow up: metachronous metastasis, local recurrence and 5 cases of postoperative mortality are described. It could be important define the when they occurred after surgery."

Response: Time of recurrence or metastasis or mortality have been listed case by case, as below.
