

ANSWERING REVIEWERS

June 15, 2015

Dear Editor,

Please find enclosed the edited manuscript in Word format (file name: 17749-case report).

Title: Report of 5 esophageal granulosa cell tumors and a literature review

Author: Wang Hong-qun, Liu Ai-jun

Name of Journal: *World Journal of Gastrointestinal Oncology*

ESPS Manuscript NO: 17749

The manuscript has been improved according to the suggestions of reviewers:

1 Format has been updated

2 Revision has been made according to the suggestions of the reviewer

(1) supplement some new literature

(2) the paper have been read and corrected by a native speaking specialist

(3) Have described the type of endoscopic mucosal resection performed

(4) delete some the endoscopic description of the gastric mucosa appearance

(5) In case 3: Why not USE was performed prior to EMR ? Because my hospital hasn't endoscope ultrasonography, a physician estimated the mass motion and position though touching the mass with biopsy forceps. If the mass is smooth surface, good activity, located in the mucosa and submucosa, the doctor may use endoscopic mucosal resection.

3 References and typesetting were corrected

Thank you again for publishing our manuscript in the *Gastrointestinal Oncology*.

Sincerely yours,

Wang Hong-qun
