

05/06/2015

Dear Editor,

World journal of Clinical Cases

Baishideng Publishing Group Inc

Subject: Waiver of IRB review and consent for ESPS manuscript no. 17764

We have reviewed the IRB policies at East Carolina University and according to the policies the IRB does not require review of case reports that do not meet the definition of human subject research which include the following:

The case report includes three records or less.

Nothing was done to the patient(s) with prior research intent.

The case report does not contain elements of a systematic investigation (e.g. statistical methods, qualitative research, structured interviews, etc.).

The case report describes an interesting treatment, presentation, or outcome.

The published article will not contain any identifiable information.

Our case report is a single patient report of a deceased patient and does not include any identifiers or elements of a systemic investigation. The policies of our IRB can be reviewed at <http://www.ecu.edu/cs-acad/rgs/irb/forms-documents.cfm>. Please feel free to contact us if you have any questions.

Sincerely,

Assad Morahan
