Title: Update on management of Barrett's esophagus

Authors: Fernando Macías-García, J Enrique Domínguez-Muñoz

Reviewer's comment (ID: 03317317):

This manuscript well summarized the management of Barrett's esophagus (BE), especially the treatment and monitoring after treatment. It is also important to confirm the high risk group for BE and dysplastic changes of BE to low or high-grade dysplasia. The author can add this point.

Response:

Thanks for the comments. All the modifications suggested by the editor and reviewers have been performed (highlighted in the edited text). The new document is attached.
