

Dear Prof. Yu

I am grateful for your sincere and meticulous help and advice you made to improve the quality of the current manuscript. In the new draft form; you will find all changes that had been required from you and from the other reviewers

Point by point response

Reviewer comments:

Q1: Although the review is from a predominantly LDLT center the DDLT perspective also needs to be looked at specifically impact of classical versus piggy back.

A1: We did not get in details into surgical techniques except the part that discusses the different modulation technique of portal inflow.

Q2: The authors also need to briefly discuss the differences in how portal flow is measured (doppler vs flow probes) when using portal flow as a guide in SFSS

A2: The different methods are mentioned in P 11 Line 8

Q3: Safety of terlipressin in patients with prior IHD with stents or post CABG

A3: The safety of terlipressin is mentioned in P13 Line 10

Q4: Impact of side clamping versus complete caval clamping needs to be discussed in more detail.

A4: We add a reference of the effect of timing of cross clamping in the development of AKI.
