The Editor  
World Journal of Gastrointestinal surgery

Dear Sir,

I have gone through the manuscript entitled “ Duodenal injury post laparoscopic cholecystectomy. Incidence, mechanism, management and outcome” authored by Dr. Norman Oneil Machado. I have looked into aspects of statistical analysis required by your Journal. This includes adequacy, appropriateness, and suitability of statistical methods and the correct interpretation of p values.

1. The statistical methods were adequately and appropriately described.
2. The statistical methods used are suitable and appropriate
3. The p values used indicate statistical significance.

Thanks
