

## Reviewer's comments

1. 'Good meta-analysis, suitable for publication' --thank you
2. 'This is a meta-analyses study about the comparison between EMR and ESD for colorectal tumors. Although this kind of meta-analyses is not the first report, this is still useful to compare both methods for colorectal tumors' --It is useful to compare both methods, this meta-analysis is one of the few that reports mid-term outcomes unlike other analyses reporting immediate or short-term outcomes
3. 'There is difference between colon endoscopic treatment and rectal treatment. So this article will be better if authors revised and add about this points' -- Thank you for these valid comments which have been incorporated into the discussion.
