Thank you so much for your comments.

Response to reviewer code: 00504962

Thank you so much for your comments. The typo errors in the text were corrected according to your suggestions. It would be really interesting to add the therapeutic advances of diabetes mellitus, however in this article our aim was to focus and present the main contributors. I strongly believe that the history of diabetes mellitus therapeutics would be a great idea for a forthcoming article.

Response to reviewer code: 00506304

Thank you so much for your comments. However the main purpose of our article was to present the main contributors in the history of diabetes mellitus which paved the way for further development in this field. Scientists such as Carl Ferdinand Cori and Gerta Theresa Cori, Bernardo Houssay, Rosalyn Yalow and others are not mentioned in the article. This is also the reason why we did not choose to summarize the Nobel prizes in DM.

The figures belong to the collection of the Wellcome Library, London and they are available free of reproduction in their current resolution. We also corrected the Greek characters and I hope that you can see it properly know.

A timeline diagram that shows important milestones is also included.
