

## **Case report revision report:**

Our title was composed of 15 words, which we had to change to 12 words according to the journal's regulations.

All changes made in the text can be found in red colour.

### **For reviewer 00503536**

1. For the association between bile duct damage and cryoglobulinemia we have added a sentence and a reference to the second paragraph of the discussion
2. For the higher frequency of cryoglobulinemia in HCV infections than HBV infections, we have added a comment and a reference to the second paragraph of the discussion
3. For grammar and spelling mistakes we have sent the manuscript to language polishing

### **For reviewer 00049727**

1. For ultrasonig and biyopsy findings of the patient, we do not have any other positive finding other than the "hepatosteatosi and cholestasi "and "Moderate cholestatic injury accompanying chronic hepatitis, and degenerative and dysplastic changes in bile ducts" which were stated in the text.
2. The antiviral therapy is named in parenthesis at the end of the case report presentation.
3. Cryoglobulinemic vasculitis is decided to be present with the dermatological findings, and a sentence indicating this subject is added to the text (to the discussion).
4. For cholestasi and cryoglobulinemia we have added a reference and a comment to the second paragraph of discussion (the same issue with the first reviewer-1st item)
5. Language polishing has been made.

### **For reviewer 00037028**

1. Language polishing has been made
2. All PMID ve doi numbers are added to the references but 2nd and 11st reference have no PMID numbers.
