RE: Manuscript 22405

Dear Editor:

Thank you for the opportunity to respond to the thoughtful comments offered by the peer reviewers. The manuscript is offered as a minireview and as such brings various sources of information into one document. We have purposefully not added new a case series to the manuscript. The goal was to describe the pros and cons of each particular treatment option and some basic guidance of when each option is appropriate. A more formal section with treatment recommendations has been added to the paper per reviewer 2's advice.

Sincerely,

Sarah Mowry, MD  
Assistant Professor  
Georgia Regents University
