The paper is interesting and well written; my major comment refers to overall presentation of data: this paper is a report of 8 cases and should be presented as is. Thus, I suggest to modify the title as well as the method section accordingly. minor comment: in the method section, the full description of the index of miller is long; a reference appear to my opinion as enough.

New title: Mechanical breakdown and thrombolysis in subacute massive pulmonary embolism: A prospective trial

In the method section, the full description of the index of miller is long-- Clear and concise language had been used

3. References and typesetting were corrected

Thank you again for publishing our manuscript in the *World Journal of Gastroenterology*.
