

Title: Constrained Fixed-Fulcrum Reverse Shoulder Arthroplasty Improves Functional Outcome in Epileptic Patients with Recurrent Shoulder Instability

Authors: Tanujan Thangarajah, Deborah Higgs, J.I.L Bayley, Simon M

Dear Sir,

We have gone through the reviewers' comments in detail, and appreciate the effort put into their analysis of our manuscript. Our responses to their pertinent comments can be found below. Regarding the language of the manuscript, changes have been made to clarify the message of the study.

Reviewer 03065895 comments

- Author should describe the patients' story like CASE 1, CASE 2...including follow-up x-rays.
 - Case presentations have been included on P11 Line 264.
 - New corresponding radiographs have been included on P26, P27, and P28.
