Reviewer 1:

Thank you for your review and your valuable comments.

Comment 1:

We reduced the number of references.

Regarding the figures, we had to specify the statistical information in the caption so the figures become meaningful. So we elaborated in detail everything in figures that was necessary for our manuscript. This was based on the journal requirements.

Comment 2:

There have been several reports indicating health deterioration among those who were exposed to OP compounds. So this was one of the main motivations behind this research. Currently we do not have enough data to comment about exposed individuals to Phosalone or to estimate the side effects in human but we are interested to explore that and thus provide better clinical guidelines and recommendations.
