Baishideng Publishing Group

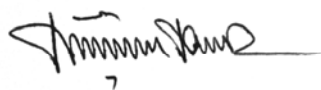

Dear Ze-Mao Gong,

We thank you and the referees for reviewing our invited review titled **Liver Transplantation: Current Status and Challenges (WJG ESPS #24986)**. Please find attached our revised and reformatted manuscript. As the 3 referees had no specific questions or requests, no changes in the content were made in the revised manuscript. Regarding the comments by the reviewer #0005388, we acknowledge that the review covers a broad area. This approach was our attempt to highlight the two distinct problems in today's liver transplant, in our opinion. We hope that the current review will stimulate directing interested readers to look further into the original research cited. As for the role of liver transplantation in unresectable hilar cholangiocarcinoma; this indication is one of the accepted MELD score exceptions in the USA.

We have made the requested changes in the references (i.e. incorporating PMID and DOI), and the figures. The signed copyright form, an audio file containing the core tip, and the results of the Google Scholar and CrossCheck analyses are attached. The conflict-of-interest statement is on the cover page of the manuscript. Finally, as we are native English speakers, no language certificate is provided.

We look forward to hearing from you.

Sincerely,

Timucin Taner, MD, PhD
