

May 27, 2016

Dear Editor,

Please find enclosed the edited manuscript in Word format (file name: FP4086\_locked for submission.docx).

**Title:** Idiopathic hypereosinophilic syndrome presenting with severe vasculitis successfully treated with imatinib

**Author:** Paolo Fraticelli, Alain Kafyeke, Massimo Mattioli, Giuseppe Pio Martino, Marta Murri, Armando Gabrielli

**Name of Journal:** *World Journal of Clinical Cases*

**ESPS Manuscript NO:** 25152

This paper has been modified in order to respond at the reviewers' comments and requirements. First of all we added more detailed explanation for figures (Reviewer's code 02445130). Second, as request, we specified that the G6PD analysis was not done because the patient was a male and we conclude suggesting a short therapeutic trial with imatinib mesilate in cases with the same or similar conditions of the one reported (Reviewer's code 00402729). References and typesetting were corrected.

The language polishing was done and you can find attached the Filipodia certification.

We really thanks for the suggestions because we are sure that they improve the quality of the paper.

Thank you again for publishing our manuscript in the *World Journal of Clinical Cases*

Sincerely yours,

A handwritten signature in dark ink, appearing to read 'Paolo Fraticelli', with a stylized flourish at the end.

**Paolo Fraticelli,**
