

Reviewer 3478805

*This article summarizes the current treatment of PM arising from CRC and listed an adequacy amount of data. This article is valuable to know the current status of CRC PM and is of high quality. However, there are two points to be revised. First, there are some sentences to be carefully corrected. Second, authors should describe more about highlights.*

The manuscript has been revised and several sentences have been corrected. Professional language editing has been performed. The certificate has been provided with the revised manuscript. Moreover, the revised manuscript has been focused on patient selection and therapeutic regimens. These issues were highlighted.
