RE: Manuscript NO 26178

Dear Dr. Yu,

Thank you very much for the review of our manuscript entitled "Split Liver Transplantation in Adults". We have revised the manuscript according to the reviewer's comments and suggestions. Specific changes are as follows. All changes are highlighted in the revised manuscript.

Reviewer 1

*Donor selection*

We agree with the suggestion. A new sentence was added in page 4.

*Graft size*

We agree with the suggestion. New sentences were added in page 5.

*Outcomes and ethical issues*

Outcomes in split liver transplantation have been historically compared with whole liver transplantation or living donor liver transplantation. Such publications were cited in this review.

*Split full right versus split full left*

We could not find the publication in Lancet in 1999 regarding full-right and full-left split. We will be more than happy to add a new citation if the reviewer helps provide more detailed information.

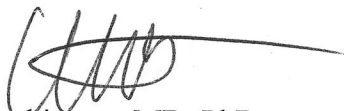

*Result of liver transplantation using tri-segmental split*

A new citation was added as the reviewer suggested (reference #26).

Thank you very much for accepting our manuscript.

---

Sincerely yours,
