Reviewer 1.

Thank you

Reviewer 2.

We decided to treat every patient with the new strategy so we could not offer data about patients treated classically.

Reviewer 3 (02861252)

I think the process of reviewing a paper is very important

As you could check I am one of the top (in number of papers reviewed) reviewers of your Editorial group. It is mandatory to explain the causes of rejection to help authors to improve the manuscript I am not upset by rejection I think that it is incorrect and unpolite to write one word for that work it is better to say no to review a manuscript.
