

Format for ANSWERING REVIEWERS

September 8, 2013

Dear Editor,

Please find enclosed the edited manuscript in Word format (file name: 2735-review.doc).

Title: Accuracy of Linear vs. Spiral Tomography: Alveolar Crest to Sinus/nasal floor Height

Authors: Mahsa Yoozbashizadeh, Seyed Ahmad Fatemitabar, Ehsan Sedighara, Arash Nikgoo

Name of Journal: *World Journal of Stomatology*

ESPS Manuscript NO: 2735

The manuscript has been improved according to the suggestions of reviewers:

1 Format has been updated

2 Revision has been made according to the suggestions of the reviewer

(1) Back ground information was removed from objectives

(2) The meaning of the abbreviations CT & CBCT were written at the first place

(3) Introduction has been improved

(4) Why did we use two skulls? Answer: An implant body of 4mm in diameter is considered as standard in clinical implantology and an ideal gap between the implants is 3mm. Considering our sample size and since we wanted to perform our study under clinical circumstances, one skull was not enough

(5) We strongly believe that our manuscript language quality is A and no polishing by a professional editor is needed.

3 References and typesetting were corrected

Thank you again for publishing our manuscript in the *World Journal of Stomatology*

Sincerely yours,

A handwritten signature in black ink that reads 'Nikgoo'.
