

ETHICS REVIEW- SELF ASSESSMENT TOOL ER-SAT

INTRODUCTION

A project that entails “*research on human subjects*” requires that it be reviewed by the institution’s research ethics board (REB) for approval prior to its initiation. However, not all projects are “research” in their intent or design, and therefore they may be exempt from the requirement of having a formal REB review prior to initiation. Projects that are properly deemed to be either: Quality improvement (QI), educational assessments, or performance review of a specific program or system- are examples of work not requiring REB review.

PURPOSE

The following tool is intended to facilitate an individual’s self assessment of their work to help determine if their project fits either a QI, Educational Assessment, or Performance Review design- and therefore not requiring a separate REB review.

Note: If your intent is to publish or present findings that are QI, Educational, or Performance in nature- this does not automatically mean the project needs REB Review. Please refer to the SQUIRES Guidelines for assistance related to the publication requirements of QI papers.

INSTRUCTION

Fill in this form by answering the questions in each section- if you require support in determining how best to answer one of these questions, please contact either the Ethics Centre (ext 4818) for support and make the appropriate notation in the review/comments box provided. Please keep a copy of this assessment tool in your project file.

Project title: Single stage acetabular component exchange for infected total hip arthroplasty

Project leader name: Dr. Jeffrey Gollish

Date of assessment: 08November2016

	Yes	No	Review/comments
A.1 Does the activity involve living human beings and/or information (data) collected from or about them?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
A.2 Does the activity involve human remains, cadavers, tissues, biological fluids, embryos or fetuses <i>other than</i> those that are commercially available?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	

ETHICS REVIEW- SELF ASSESSMENT TOOL ER-SAT

<p>If you answered YES to either question A.1 or A.2 the activity described involves human subjects but may not require review. Please proceed to section B.</p> <p>If you answered NO to both of the questions in Part A, then your project does not involve human subjects or their information, and does not require research ethics review.</p>			
	YES	NO	Review/comments
<p>B. Is the primary consideration of your project to contribute or add to a body of generalizable knowledge in the academic community? The term generalizability means that you specifically structured your project such that the results you obtained would be applicable to programs outside of the local area you did your research. (i.e. The results of your QI project are meant to apply to areas outside of the local area it was initially intended to be used. This does NOT apply to projects that will be implemented in other areas of the same organization after an initial pilot or testing phase).</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<p>Dr. Gollish mentioned that he and his Fellow were reviewing aspects of Dr. Gollish's medical practice. That he has been doing this type of surgery for years, but there isn't really a formal mechanism for assessing it. And that the Royal College recommends this kind of practice assessment and improvement:</p> <p>http://www.royalcollege.ca/portal/page/portal/rc/common/documents/moc_program/moc_insert_e.pdf</p>
<p>If you answered Yes to B- your project is probably research and you will need to apply to the REB</p> <p>If No, proceed to section C</p>			
	YES	NO	Review/comments
<p>C1 Is the primary intent of the activity to assess the performance of an organization, its medical staff, employees or students?</p>	<input type="checkbox"/>	<input type="checkbox"/>	N/A
<p>C2 Is the primary goal of the activity to improve process of care or to create an intervention to meet known/accepted standards of care? (This could be a project that is mandated by your department- or part of the terms and condition of your employment)</p>	<input type="checkbox"/>	<input type="checkbox"/>	N/A
<p>C3 Would the activity take place, regardless of whether or not the research is disseminated to those outside of the organization and other direct stakeholders?</p>	<input type="checkbox"/>	<input type="checkbox"/>	N/A
<p>C4 Does the activity involve testing/evaluating within normal/established educational requirements? (Example- you created an educational event and you also developed an assessment tool to give to participants to help evaluate how well the event did- this would be considered an evaluation within normal educational requirements)</p>	<input type="checkbox"/>	<input type="checkbox"/>	N/A

ETHICS REVIEW- SELF ASSESSMENT TOOL ER-SAT

<p>If you answered Yes to any question in section C your project may be considered a QI/Education or Performance Review project please complete question D below.</p> <p>If you answered No to all the questions in section C-please submit your project for REB review</p>			
	YES	NO	Review/comments
D 1 Will you be randomizing participants to intervention-specific groups?	<input type="checkbox"/>	<input type="checkbox"/>	N/A
D2 Will you be requiring additional testing of subjects?	<input type="checkbox"/>	<input type="checkbox"/>	N/A
D3 Are subjects being exposed to non standard of care treatments or interventions?	<input type="checkbox"/>	<input type="checkbox"/>	N/A
D4 Might your intervention result (directly or unintentionally) in any potential risk or harm to patients/staff?	<input type="checkbox"/>	<input type="checkbox"/>	N/A
D5 Are you sampling from a larger community than your local area of responsibility (i.e. City wide, Provincial, etc sampling)?	<input type="checkbox"/>	<input type="checkbox"/>	N/A
D 6 Will your project involve the use of an untested: piece of equipment, medical device or drug that is not yet supported with suitable evidence to support its use in the specific application you are proposing?	<input type="checkbox"/>	<input type="checkbox"/>	N/A
<p>If you answered Yes to any of the questions in section E, your project will need REB review</p> <p>Otherwise your project will not require REB review</p>			
<p>If this assessment tool indicated that your project does not require REB review, it is recommended that you print and save a copy of this document for your files. On completion of your project, and in the event that you are interested in having your project published- a notation of this assessment process can be referred to in the methodology section of your paper and submitted for review (if the journal requests further documentation).</p>			

ETHICS REVIEW- SELF ASSESSMENT TOOL ER-SAT

Additional Consideration Not all research projects require REB review. If your research is based on one of the following (Answering Yes to any question below) conditions it is exempt from formal review.

Criteria	YES	NO	Review/comments
1 Is the activity based <i>solely</i> on obtaining information that is generally available to the public? Are you able to access this information by website, brochures, booklets, etc. without being a member of a group or organization, or any other formal or informal requirement? (This entails stored documentary material, records or publications which may or may not include identifiable information and that has no restrictions on its use or distribution, or that may be released under certain legal conditions)	<input type="checkbox"/>	<input type="checkbox"/>	N/A
2 Does your project involve only the observation of people in public places without an intervention? (The study of behavior in a natural environment in which people involved in their normal activities are observed whether with or without their knowledge, No interaction with participants is involved, the targeted group have no reasonable expectation of privacy and the results do not allow for identification of specific individuals) [By example: A hallway, visiting room, and foyer would be considered public places. A patient's room, staff offices, surgical suites, etc. would be considered private spaces]	<input type="checkbox"/>	<input type="checkbox"/>	N/A
3 Does your project rely exclusively on data 1) that was initially collected for a different purpose than your current project (i.e. your project would involve "secondary use" of the data)? And 2) Was the data given to you as anonymous information or anonymous human biological materials (Anonymous information refers to information that from your perspective never had identifiers associated with it- and also that the collected information will not be linked with other data sets that may render the information identifiable in the future).	<input type="checkbox"/>	<input type="checkbox"/>	N/A
