

Answering reviewers

Reviewer 1:

These authors made a comprehensive review of meta-analyses on statin use and risk of cancer. They also made tables and figures, which make readers easy to catch the study methods, strength and results from each meta-analysis. It will be informative for readers interested in this topic. I have no questions or requests for the authors.

Thank you.

Reviewer 2:

This is a well written metaanalysis article.

Thank you.
